TAKEOFF FIELD LENGTH REQUIREMENTS

1. Introduction

This subsection gives data on the aircraft performance and field length requirements related to takeoff during normal operations. This subsection is divided into the chapter that follows:

- FAR takeoff runway length requirements.

2. FAR Takeoff Field Length Requirements

NOTE: For more information about aircraft performance, refer to the Aircraft Flight Manual (CSP B-012).

- A. Refer to Figure 1 for the takeoff field length ISA.
- B. Refer to Figure 2 for the takeoff field length ISA + 15°C.
- C. Refer to Figure 3 for the takeoff field length ISA + 20°C.
- D. Refer to Figure 4 for the takeoff field length ISA + 25°C.
- E. Refer to Figure 5 for the takeoff field length ISA + 30°C.
- F. Refer to Figure 6 for the takeoff field length ISA + 35°C.

LANDING FIELD LENGTH REQUIREMENTS

1. General

This subsection gives data on the aircraft performance and field length requirements related to landing during normal operations. This subsection is divided into the chapters that follow:

- FAR landing field length requirements
- Landing speed restrictions

2. FAR Landing Field Length Requirements

NOTE: FAR 25 landing field length versus landing weight are for dry runway and ISA conditions. The actual landing distance on a dry runway is equal to the dry runway landing field length multiplied by 0.6.

- A. For more information about landing field, refer to the Aircraft Flight Manual (CSP B-012).
- B. Refer to Figure 1 for the dry landing field length with flaps at 45 degrees/slats extended.
